WHOLE HOUSE WATER
FILTRATION & STERILISATION SYSTEM

Aqua Filter

When people think about water filtration, they generally only consider drinking water. However consider the possibilities of water borne diseases from other usages like when you're brushing your teeth, having a shower or bath and for general use while cooking and drinking. Aqua Filter sterilizes water, protecting you and your family against water born diseases and from bacteria such as E.Coli, Giardia and Crypto. Now no more "boil-water" notices, the Aqua Filter will take care of all your water needs.

Originally designed to sterilise rural tank and ground water, Aqua Filter has grown to service both residential and commercial businesses. Whether you are a small business trying to save money by replacing your weekly water delivery or a cafe trying to prevent your coffee machine from clogging up, we have products that are suitable for:

- Filtering water to food service businesses places like cafes, restaurants, and food manufacturers
- Filtering water used in tourism developments such as Hotels, Motels Caravan Parks and B&Bs
- Filtering water for all sizes of homes, including holiday homes
- Filtering water for Mining and Construction Camps

Rain tank water can contain bird/bat droppings, rodent faeces, insects, leaves and other dead animals. Tank water is a perfect breeding ground for all kinds of bacteria and viruses. Sediments and dirt can clog up your water pipes, washing machines, dishwashers and other appliances which can potentially lead to damage. Bore hole water can contain run-offs from fertilizers, chemicals and spray residue as well as cow and sheep manure. Town supply water usually contains chemicals such as Chlorine, and sometimes flouride (dental), which can have cumulative toxic effects on the human body.

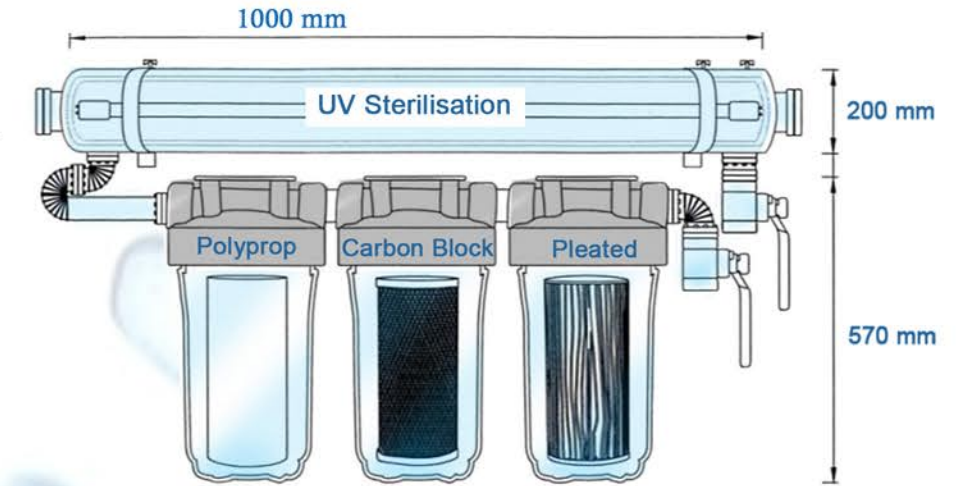

Features

- **DURABLE CONSTRUCTION**
Our water system has been engineered to last, with stainless steel fittings, extra strong filter housings and a water resistant aluminium casing to protect the system.
- **POWERFUL UV SUPPLY**
No more fear of sickness due to nasty bacteria or viruses lurking in your water supply, our models are fitted with powerful UV lamps with high sterilisation power.
- **3-STAGE FILTRATION SYSTEM**
The 3 pre-filters ensure that no sediments or contaminants will enter your house water supply.
- **UV MONITORING**
The Ballast will give plenty of warning when lamp life is coming to an end and will sound if any failures have occurred.
- **FILTER MONITORING**
Each filter housing comes fitted with pressure gauges so you can feel confident of when to replace filters.
- **NO ASSEMBLY REQUIRED**
Our systems come pre-assembled for easy installation. Mount on the wall, connect water supply, plug into power supply, you're done.

3 Stage Filtration + UV Sterilisation

WaterGuard Filters

- **10" Pleated Filter**
